Theory of relativity (E=mc²) plays a key role in Ayurveda

Vaidhshiromani Dheeraj Sharma, Dr. Rajesh Kumar Mishra, Dr. CB Dhanraj, Dr. MK Yadav, Dr. Ramakant Marde, Dr. SC Joshi, Dr. Anil Verma, Dr. GB Karunakar, Dr. Ashish Goswami, Dr. Neha Arya, Dr. Rajeev Singh, Dr. Suman and Dr. Preeti Pandey

Abstract
The theory of Relativity play very-very important Role in Ayurveda, we can say that theory of Relativity has a major place in Ayurveda and Ayurveda is the only medical system in the world in which all the sciences are included, such as chemistry, mathematics, biology, physics etc. are Present in Ayurveda. that is all the science are described in detail in Ayurveda, in our Ayurveda shastra treatment is done on the basis of elements and the elements are made UP OF trigunas. There is an interconnected Relationship between the elements and the triguna. We can generate May types of factors and their molecular energy from the panchabhutas and trigunas it is told in our vedas that we can generate energy and energy substances from the interrelationships with the trigunas and Panchabhutas. Combination of trigunas and Panchabhutas, we can create such energetic Factors which play an important Role in the health of the living world and the environment and which can provide welfare to all living beings. Because the triguna (Satva, Raj, Tama) are Present in everything from the smallest Particle to the biggest planet, hence we can say that the triple existence is Prevalent in the entire universe. and the triple gunas have an Important contribution in the events taking place in this world and with the combination of this Trigunas, we can prepare such an energetic medicine which prove beneficial and effective for living beings Hence we can say that $E= mc^2$ is the highest ternary Reaction for making Excellent medicines in Ayurveda.

Introduction
E=mc² is a Vedic elemental Trigunas Reaction. This Reaction intervenes in most of events occurring in this universe. $E = mc^2$ is a molecular Reaction occurring all over the world. this Reaction has been mentioned in detail in our Vedic Scriptures and it can prove to be very effective in the medical Field as well because from this equation we can use such Properties which are very effective Physically and we can use the energy generated from their use for the Prevention of many diseases arising in the body According to elements and their quantities specified in this E=mc² equation, we select the medicine, and get them Reacted, after that we get energetic elements which are beneficial in the disorders occurring in the body in this way, by using medicines according to Excellent Qualitative Principles, we can establish an excellent medical system. Ayurveda is the only medical science which contains all the sciences. We can Express Ayurveda in any language. we can say that Ayurveda is the only medical Science in the world which we can express in any science, be it physics, chemistry, Mathe mathematics science, Ayurveda is the ocean of all Sciences Ayurveda science works at the molecular level of substances and Represents the Rate of change of molecules excellently Ayurved also coordinates and controls every action and Reaction taking place in substances and we can achieve molecular level Results through Ayurveda science. The Principles of Ayurveda medical science work on the basis of trigunas and Panchabhutas on the basis of their predominance Panchmahabhoat and trigunas manifest their predominance, every medicine of Ayurveda Science contains trigunas and Panchbhoot and these medicines work according to the Predominance of qualities. It removes the deformities of the body.

Triguna plays an important Role in our body. Triguna plays a major Role in every event that happens in our body. We can also say that the trigunas contribute to every event that occurs in the universe because they work from the molecular level to the higher level. In the vedic scriptures, the trigunas have been described in detail and their method of working has also been described in a scientific manner. The trigunas are such components of the entire universe that they work everywhere in all places and everywhere in the Principles, generate, operate and control every action and Reaction. By using medicines according to the Nature of these triguna, we can prepare Such medicines which can Prove effective and beneficial for the living world because according to the Principle of the combination of these trigunas the energy obtained from the combination is very active energy and plays a major Role in energizing i any substance.

Introduction of Trigunas:

सत्व----------रज------------

-तम

Triguna is the creative and Functional unite of the entire universe and it is the main, working component of the entire universe through which the operation of microscopic to huge particles is generated and sregulated. the trigunas are active in all living and non-living substances, even the movement of all the planets is possible only because of the trigunas play a major Role in the shining of sun and moon and in the birth and death of living beings. The trigunas have a major role in the destruction and creation of any cell, the trigunas have been called the Elements of Destruction and creation of the universe. The tri principles of tri Gunas work on a huge scale in the entire universe and in all the particles. Even in the movement of wind, Passage of Age, coming of tides and ebbs and Flashing of lightning trigunas plays a major Role in this au situation. These trigunas are active and implemented from the micro level to the macro level. Major changes in the universe take place only because of the trigunas. We are able to verify and implement the Reaction as per our Priority. Even the triple gunas played an important Role in the destruction and creation of the universe. By carrying out mutual Reactions according to the Properties of these Trigunas, we can obtain many energy Rich molecules which will prove to

be very beneficial for human life.

Explanation of E=mc² according to Physics and Ayurveda science:
According to Physics:
E = mc² (theory of Relativity) E = energy
M = mass
C = Speed of light (3×10^8 m/s)

Technological applications of the theory of Relativity according to Physics
Introduction
The 20th century saw the birth of two famous theories: relativity and quantum theory. This article deals with the theory of relativity, which was developed by Albert Einstein (1879-1955) in two stages. In 1905 Einstein proposed his Special Theory of relativity. It is called 'special' because it is restricted to uniform motion. That is, either rest or constant motion. Out of this Special Theory grew the most famous equation of all of physics: E=mc2. In 1916 Einstein went a step further and proposed his General Theory of Relativity. This theory was no longer restricted to uniform or inertial motion. It applies to both uniform and non-uniform motion. Non-uniform motion occurs when a system undergoes acceleration or rotation. Gravity, for instance, accelerates objects toward the Earth. The General Theory is truly revolutionary because it replaces Newton's theory of gravitation by the notion of space-time curvature. The mathematics of the General Theory is also vastly more complicated than that of the Special Theory. This article is not be concerned with the mathematical or philosophical aspects of the Theory of Relativity, but with its technological applications. It may not be obvious to the reader but both theories have led to many technological innovations, which are encountered in daily life, from cell phones to GPS, from speed guns to nuclear power. As Atkins put it Einstein "moved civilization forward in two steps [1]. It is convenient to start with the applications of the Special Theory of Relativity (STR) before turning to the General Theory of Relativity (GTR).
Technological Applications of the Special Theory.
From a historical perspective, the Special Theory is basically the crowing of classical physics. But it has vast implications for our understanding of space and time. That is, it affects the measurement of spatial and temporal intervals. In particular, the running of clocks lies at the root of the technological application of the Special Theory.
One of the great pleasures of modern life is the freedom of movement afforded by the use of motor vehicles. But as so often there is a sting in the tail. Modern cars can move very fast, and often people break speed limits, resulting in fines. But how is the speed of objects, such as a car or a tennis ball, measured? Speed guns use the so-called Doppler Effect to perform measurements. The effect is named after the Austrian physicist Christian Doppler.

According to Ayurveda Science:

$E = $ *सत्व*

$M = $ *तम*

$C = $ *रज*

सत्व = *पित्त*

तम = *कफ*

रज = *वात*

(*रज*) *वात* = (*वायु* + *आकाश*)—— *तिक्त रस*

(*तम*) *कफ* = (*पृथ्वी* + *जल*)—— *मधुर रस*

(*सत्व*) *पित्त* = (*अग्नि* + *जल*)—— *लवण रस*

$$सत्व = रज \times (तम)^2$$

E=mc²
Emergy = mass × (speed 0f Light)²
सत्व = *तम* × (*रज*)²
= *कफ* × (*वात*)²
= (*पृथ्वी* + *जल*) × (*वायु* + *आकाश*)²
= *मधुर* × (*तिक्त*)²
E = *मधुर* × (*तिक्त*)²

This is Final Result of theory of Relativity in Ayurveda science.
- This is a very effective way of making an energetic drug that cam Prove to be very effective in medical world.
- Main application of E=mc² in ayurveda.

1.For manufacturing energetic drugs:
E= mc²
E = *तम* × (*रज*)²
E = *कफ* × (*वात*)²
E = (*पृथ्वी* + *जल*) × (*वायु* + *आकाश*)²
E = *मधुर* × (*तिक्त*)²

E = 1 part(*मधुर*) × 2 *part*(*तिक्त*)

This is a perfect formula for developing energetic drugs

$E = $ 1part(*मधुर*) × 2*part* (*तिक्त*) ————}} ENERGY (*ऊर्जा*)

Through this equation, we can make such an energetic drugs by taking 1 part
Madhur and 2 parts tikta Matters, which can prove to be very Benefical for the living world

2. in instant energetic drink manufacturing:

E = 1 *part* (*मधुर*) x 2 *part* (*तिक्त*) ————}} ENERGY

DRINK (*ऊर्जा द्रव*)

Through this triple formula, we can prepare such a medicine, which when used immediately gives a Feeling of energy in the body that is, after taking which the working efficiency of the body will increase and the body will become stronger. Even a weak patient becomes capable of doing physical and mental activities after consuming this instant energy drink.

3.in Solid Propellant Rocket Fuel manufacturing :

$$E = तम \times (रज)^2$$

$$E = (पृथ्वी + जल) \, x \, (वायु + आकाश)^2$$

$$E = मधुर \, x \, (तिक्त)^2$$

E =1 kalmisora x 2 (saral+ kampila*k*)

E= 1 Suger x 2 (saral + kamplila*k*)

This Formula is used to manufacture Solid Propellant fuel through this formula we can make cheap Rocket Fuel and make sky travel cheap and pollution Free through this Rocket fuel, we can advance space Science and activate space mission in low cost and achieve fame in the space world.

Conclusion
On the basis of the mentioned equation, it is Proved that theory of Relativity plays an important Role in Ayurveda By using the trigunas equivalent to E=mc² we can prepare an important medicine which will prove to be very beneficial for the human world. we should use the theory of Relativity in medical science so that we can get New Result which can play a major Role in human health we can set a New Record in the medical world by making medicines using the same trigunas of the theory of Relativity. In Ayurved Science, theory of relativity should be fully be to invent new discoveries and create new medinces.
